Updated on: December 2004

Level Detail: 1: 1 000 000

Accuracy (Scale digitised): 1: 500 000

Completeness: 80%

Most major water features have been included

Reliability of data:

- ☐ Primary source – High quality data
- ☒ Primary source – Reasonable data
- ☐ Primary source – Rapidly assessed data
- ☐ Secondary source
- ☐ Different sources with different levels of reliability

Comments:

The file was developed from several map sources (TPC, British topos, Russians and a lesser degree, the Landsat 7's).

The shp database file includes the following fields:

1. **Name:** Name of water feature where known
2. **Descrip:** Alphanumeric description of Seasonality of the water feature
3. **Type:** Alphanumeric Classification:
 - Fresh water marsh
 - Salt pan
 - Lake
4. **Agency:** Agency that prepared the shp
